

Sustainable Event Measurement Tool

The simply easier to measure, manage and report while saving time and money tool

Measure process and performance

- Measurement and reporting of event water, waste, energy, paper, food and community impacts
- Calculation of carbon emissions using international standards and datasets
- Transparent reporting of internal and supply chain sustainability processes and procedures to demonstrate commitment to green and sustainable practice

Suppliers – Demonstrate your commitment and performance efficiently and simply

- Proactively pre-load your facilities and services
- Tailor your existing measurement systems leveraging your environmental sustainability data and investment
- Connect to buyers who care about your green and social programs
- Help your clients to measure and report event impacts

Planners – Simplify the measurement process and save time by:

- Sharing and improving event sustainability measurement amongst staff and suppliers
- Request suppliers to input data directly into the database
- Starting with a basic version and then evolving to advanced level data entry for high performance measurement
- Export data to PDF and Excel formats for integration into business sustainability reports

Free to over 23,500 MPI Members and Planners, the Sustainable Event Management Tool helps organizations manage costs and sustainability impacts by identifying and analyzing areas to realize efficiency and innovation.
